Abstract

A Qualitative type of research was used in the conduct of this study, aimed to gather perceptions on the changes the municipality of Cabatuan underwent before and until such time that the Iloilo Airport of International Standard was built and started to operate. The respondents were the two (2) residents of the community of Cabatuan. The researchers used interview method to gather the data for the said study. Pictures of Cabatuan before and the present were also gathered to determine their significant difference. The major result of the study is that the construction of Iloilo Airport of International Standard in Cabatuan is perceived to be the next economic gateway to wider opportunities and multi-business to the Ilonggos and to the rest of the world.
