"Influence of Certain Variables to the English Proficiency of the BSCSM Students". Undergraduate research paper. John B. Lacson Foundation Maritime University-(Molo), Inc., Iloilo City, April 2010.

Abstract

This descriptive-correlational research is focused on the influence of certain variables to the English Proficiency of BSCSM students of JBLFMU-Molo, Inc. Sources of data were twenty-five randomly selected BSCSM Students of the College of Business of John B. Lacson Foundation Maritime University-Molo, Inc. during the first semester of 2009-2010. Sampling method used was the proportionate random sampling. Means and standard deviations were the descriptive statistics used. Inferential statistics used was Spearman rho set at .05 alpha level. Students taking up BSCSM are generally "proficient" in English. If personal

related factors are used to categorize the students, they still reveal "proficient" English skills. The mean scores of the students reveal the same proficiency level among them but the female students have better mean average than the males and although not very conclusive, points to the fact that the females are a little advance in terms of English proficiency. There is no significant relationship between English proficiency and students' gender and high school English grade. Results further show that the relationship between English proficiency and high school of origin is negative and not significant.
