Abstract

This case study aimed to determine and analyze the "Learning Experiences of the Students with Hearing Disabilities at John B. Lacson Foundation Maritime University (JBLFMU) Molo, Iloilo City for the A.Y 2010 – 2011". This study is integral for the development of both the students with hearing disabilities and the institution. The study shows certain points in which the students with hearing disabilities may have the opportunity to further improve their capabilities. The respondents of the study were the 12 students with hearing disabilities. They are taking Bachelor of Science in Information Technology at John B. Lacson Foundation Maritime University Molo. They are composed of four 2nd year, six 3rd year and two 4th year students with hearing disabilities. The data through interviews were organized according to individual respondents, whereas the data from some documents were reflected through graphical representations like graphs and tables to reduce the volume of information and they were shown in a more condensed and concise manner. Providing enough interpreters, multimedia presentation and proper execution, the students with hearing disabilities can
