Contents

Preface ix
Preface to the SI Edition xiii
Nomenclature xv

CHAPTER 1
BASIC CONSIDERATIONS **3**

1.1 Introduction 3
1.2 Dimensions, Units, and Physical Quantities 4
1.3 Continuum View of Gases and Liquids 8
1.4 Pressure and Temperature Scales 10
1.5 Fluid Properties 13
1.6 Conservation Laws 22
1.7 Thermodynamic Properties and Relationships 23
1.8 Summary 28
Problems 30

CHAPTER 2
FLUID STATICS **37**

2.1 Introduction 37
2.2 Pressure at a Point 38
2.3 Pressure Variation 39
2.4 Fluids at Rest 40
2.5 Linearly Accelerating Containers 64
2.6 Rotating Containers 66

2.7 Summary 68
Problems 70

CHAPTER 3
INTRODUCTION TO FLUIDS IN MOTION **83**
3.1 Introduction 83
3.2 Description of Fluid Motion 84
3.3 Classification of Fluid Flows 95
3.4 The Bernoulli Equation 102
3.5 Summary 111
Problems 113

CHAPTER 4
THE INTEGRAL FORMS OF THE FUNDAMENTAL LAWS **123**
4.1 Introduction 124
4.2 The Three Basic Laws 124
4.3 System-to-Control-Volume Transformation 127
4.4 Conservation of Mass 131
4.5 Energy Equation 139
4.6 Momentum Equation 151
4.7 Moment-of-Momentum Equation 180
4.8 Summary 183
Problems 186

CHAPTER 5
THE DIFFERENTIAL FORMS OF THE FUNDAMENTAL LAWS **207**
5.1 Introduction 207
5.2 Differential Continuity Equation 209
5.3 Differential Momentum Equation 214
5.4 Differential Energy Equation 227
5.5 Summary 233
Problems 235

CHAPTER 6
DIMENSIONAL ANALYSIS AND SIMILITUDE **241**
6.1 Introduction 241
6.2 Dimensional Analysis 243
6.3 Similitude 252
6.4 Normalized Differential Equations 261
6.5 Summary 264
Problems 266

CHAPTER 7
INTERNAL FLOWS **275**
7.1 Introduction 275
7.2 Entrance Flow and Developed Flow 276
7.3 Laminar Flow in a Pipe 278

7.4 Laminar Flow Between Parallel Plates 285
7.5 Laminar Flow Between Rotating Cylinders 291
7.6 Turbulent Flow in a Pipe 295
7.7 Uniform Turbulent Flow in Open Channels 326
7.8 Summary 330
Problems 332

CHAPTER 8
EXTERNAL FLOWS **347**
8.1 Introduction 348
8.2 Separation 351
8.3 Flow Around Immersed Bodies 353
8.4 Lift and Drag on Airfoils 368
8.5 Potential-Flow Theory 373
8.6 Boundary-Layer Theory 384
8.7 Summary 408
Problems 410

CHAPTER 9
COMPRESSIBLE FLOW **425**
9.1 Introduction 425
9.2 Speed of Sound and the Mach Number 427
9.3 Isentropic Nozzle Flow 431
9.4 Normal Shock Wave 441
9.5 Shock Waves in Converging-Diverging Nozzles 448
9.6 Vapor Flow through a Nozzle 453
9.7 Oblique Shock Wave 455
9.8 Isentropic Expansion Waves 460
9.9 Summary 464
Problems 465

CHAPTER 10
FLOW IN OPEN CHANNELS **473**
10.1 Introduction 474
10.2 Open-Channel Flows 475
10.3 Uniform Flow 477
10.4 Energy Concepts 484
10.5 Momentum Concepts 497
10.6 Nonuniform Gradually Varied Flow 509
10.7 Numerical Analysis of Water Surface Profiles 517
10.8 Summary 527
Problems 528

CHAPTER 11
FLOWS IN PIPING SYSTEMS **541**
11.1 Introduction 541
11.2 Losses in Piping Systems 542
11.3 Simple Pipe Systems 547
11.4 Analysis of Pipe Networks 558

11.5 Unsteady Flow in Pipelines 570
11.6 Summary 578
Problems 579

CHAPTER 12
TURBOMACHINERY **593**
12.1 Introduction 593
12.2 Turbopumps 594
12.3 Dimensional Analysis and Similitude for Turbomachinery 610
12.4 Use of Turbopumps in Piping Systems 619
12.5 Turbines 625
12.6 Summary 639
Problems 640

CHAPTER 13
MEASUREMENTS IN FLUID MECHANICS **647**
13.1 Introduction 647
13.2 Measurement of Local Flow Parameters 648
13.3 Flow Rate Measurement 655
13.4 Flow Visualization 664
13.5 Data Acquisition and Analysis 672
13.6 Summary 683
Problems 683

CHAPTER 14
COMPUTATIONAL FLUID DYNAMICS **687**
14.1 Introduction 687
14.2 Examples of Finite-Difference Methods 688
14.3 Stability, Convergence, and Error 699
14.4 Solution of Couette Flow 705
14.5 Solution of Two-Dimensional Steady-State Potential Flow 709
14.6 Summary 715
Problems 717

APPENDIX **721**
A. Units and Conversions and Mathematical Relationships 721
B. Fluid Properties 726
C. Properties of Areas and Volumes 732
D. Compressible-Flow Tables for Air 733
E. Numerical Solutions for Chapter 10 742
F. Numerical Solutions for Chapter 11 749

BIBLIOGRAPHY **764**
References 764
General Interest 765

SELECTED ANSWERS **767**

INDEX **775**

Index

A

Absolute pressure, 11
Acceleration, 87–89
Accelerating containers, 64
  Cartesian coordinates, 88
  convective acceleration, 88
  local acceleration, 88
  material derivative, 88
  substantial derivative, 88
Added mass, 367
  problems dealing with, 414
Adiabatic, 27
Adverse pressure gradient, 352
Aerodynamic analysis of rotating wind-turbine blade, 172–176
Air at atmospheric pressure, properties, 727
Air foils, lift and drag, 368–372
Alternate depths, 485
Analytic function, 375
Andrade's equation, 16
Anemometers, 652
Angular acceleration, 89
Angular velocity, 90
Apparent shear stress, 298
Approximate solution, laminar boundary layer, 388–392
Archimedes' principle, 58
Area properties, 732
Atmospheric pressure, 10–11, 42–43
Axial flow pump, 595
Axial-flow turbine, 630
Axial pumps, 602–606

B

Basic flow equations, 373–377
Basic laws, 125–127
  conservation of mass, 125
  control volume, 127
  first law of thermodynamics, 125
  moment of momentum equation, 126

Newton's second law, 125–126
problems dealing with, 186–187
specific energy, 125
system, 124
Bernoulli's equation, 102–111
cavitation, 106
definition, 104
problems dealing with, 117–121
separated region, 106
stagnation pressure, 104
stall, 106
static pressure, 104
total pressure, 104
uses, 105
Best operating point, 620
Bingham fluids, 16
Blasius formula, 393
Boiling, 21
Boundary conditions, 208
Boundary layers, 97
problems dealing with, 418–419
Boundary-layer theory, 384–408
Bourdon gage, 649
Boundary-value problem, 208
approximate solution, laminar boundary layer, 388–392
Blasius formula, 393
buffer zone, 398
critical Reynolds number, 385
displacement thickness, 388
general background, 384–386
inner region, 396
laminar boundary-layer equation, 401–405
local Reynolds number, 385
momentum thickness, 388
outer region, 396
pressure-gradient effects, 405–408
self-similar, 396
shear velocity, 396
skin friction coefficient, 390
turbulent boundary layer, empirical form, 396–401
turbulent boundary layer, power-law form, 392–396
von Kármán integral number, 386–388
Boundary-value problem, 208
Brake power, 601
Branch piping, 553–558
Broad-crested weir, 493–494
Bubble, 19, 21
Buckingham π theorem, 243, 245–250
Buffer zone, 302, 398
Bulk modulus, 429
Bulk modulus of elasticity, 17
Buoyancy, 58–60
law, 58
problems dealing with, 78–79

C

Capillary tube, 20
Cartesian coordinates, 88
Casing, 594
Cauchy-Riemann equations, 375
Cavitating propeller, 21
Cavitation, 21, 106, 364
cavitation number, 365
fixed cavitation, 365
problems dealing with, 414
traveling cavitation, 364
with turbines, 630–632
in turbomachines, 606–610
vibratory cavitation, 365
vortex cavitation, 365
Cavitation number, 365
Celerity, 514
Center of buoyancy, 61
Center of pressure, 50
Centrifugal pump, 595
Channel constriction, 488–490

Channel entrance with critical flow, 490–492
Channel geometry, 477–479
Chapter 10 numerical solutions, 742–748
Chapter 11 numerical solutions, 749–763
EPANET 2 numerical solution, 757–763
Excel® solution, chapter 11, 754
Excel® spreadsheet formulas, 755
Characteristic curves
pumps operating in parallel, 621
pumps operating in series, 622
Chezy coefficient, 327
Chezy equation, 327
Chezy-Manning equation, 327, 480
Choked flow, 435, 489
Choking condition, 489
Chord, 351
Circulation, 378
Coefficient of compressibility, 17
Coefficient of viscosity, 220
Colebrook equation, 310
Colebrook formula, 544
Common dimensionless parameters, 250–251
Common liquids, atmospheric pressure properties, 60 to 70°F, 729
Completely turbulent regime, 308
Complex velocity potential, 375
Components, 542
Compressibility
definition, 17–18
problems dealing with, 33
Compressible flow, 102, 260, 425–471
in elastic pipe, 572–578
isentropic expansion waves, 460–463
isentropic nozzle flow, 431–441
oblique shock wave, 455–460
shock wave, converging-diverging nozzles, 448–453
shock wave, normal, 441–448
speed of sound and Mach number, 427–431
vapor flow through a nozzle, 453–455
Compressible-flow tables for air, 733–741
isentropic flow, 733–735
normal-shock flow, 735–739
Prandtl–Meyer function, 740–741
Condensation shock, 454
Confined flows, 254–255
Conjugate depth, 498
Conservation laws, 22
momentum, 22
energy, 22
mass, 22
Conservation of mass, 125, 131–139
definition, 125
discharge, 133
problems dealing with, 188–192
Conservation of momentum, 22
Constant density, 102
Constant volume specific heat, 26
Constitutive equations, 220
Containers
linearly accelerating, 64–65
problems dealing with, 80
rotating, 66–68
problems dealing with, 81
Continuity equation, 133, 426
differential, 210
Continuum, 9
Contraction coefficient, 657
Controls and critical flow, 514–515
Contraction, flow through, 105
Control surface, 127
Control volume, 127
Control-volume analysis of wind turbines, 166–172
Convective acceleration, 88
Converging-diverging nozzles, 448–453
Conversions, 722
Coriolis acceleration, 89

Correlation coefficient, 300
Couette flow, 286
Creeping flows, 348
Critical area, 434
Critical cavitation number, 608
Critical depth, 485
Critical energy, 485
Critical Reynold number, 99, 385
Critical zone, 308
Curved surfaces, 54–58
  problems dealing with, 76–77

D

Darcy–Weisbach equation, 281, 326
Data acquisition, 672
Deflection angle, 456
Deflectors, momentum equation applied to, 158–165
  moving deflectors, 159
  stationary deflector, 159
Density
  definition, 13–14
  problems dealing with, 31–32
Derived units, 6
Design discharge, 620
Design head, 620
Detached shock waves, 458
Developed flow, 96, 276–278
Developed laminar flow, 276
Differential continuity equation, 209–214
  definition, 210
  gradient operator, 210
  incompressible flow, 210
  nonhomogeneous flows, 211
  problems dealing with, 235–237
  stratified flows, 211
Differential energy equation, 227–232
  Fourier's law of heat transfer, 227
  problems dealing with, 239
  thermal conductivity, 227
Differential equation, 297–301
Differential equation for gradually varied flow, 509–511
Differential forms of fundamental laws, 207–209
  boundary conditions, 208
  boundary-value problem, 208
  initial conditions, 208
  initial-value problem, 208
Differential momentum equation, 214–226
  coefficient of viscosity, 220
  constitutive equations, 220
  Euler's equations, 216–219
  general formulation, 214–216
  homogeneous fluid, 220
  isotropic fluids, 220
  Navier-Stokes equations, 219–222
  Newtonian fluids, 220
  normal stress, 215
  persistence of irrotationality, 224
  Stokes hypothesis, 220
  vortex line, 224
  vortex tube, 224
  vorticity equations, 223–226
Difference operators, 693
Differential volume elements, 129
Diffuser, 433
Dilants, 16
Dimensional analysis, 243–252
  Buckingham π-theorem, 243, 245–250
  dimensionless parameters, common, 250–252
  dimensionless parameters, fluid mechanics, 252
  dimensions review, 244–245
  motivation, 243–244
  problems dealing with, 266–268
  repeating variables, 246
Dimensional analysis and similitude, 610–619
  dimensionless coefficients, 610–614

homologous units, 611
problems dealing with, 641
similarity rules, 614–616
specific speed, 616–619
turbomachinery similarity rules, 614
Dimensional homogeneity, 241
Dimensionless coefficients, 610–614
Dimensionless parameters, common, 250–252
Dimensionless parameters, fluid mechanics, 252
Dimensionless performance curves, 611
Dimensionless pressure drop vs. dimensionless velocity, 241
Dimensions, 4–8
derived units, 6
prefixes, 6
problems dealing with, 34–35
units, 6
Dimensions review, 244–245
Direct integration methods, 525–527
Discharge, 133
Discretization, 689
Discharge coefficient, 493
Dissipation function, 230
Displacement thickness, 388
Doublet, 378
Double strength, 378
Draft tube, 627
Drag, 349
Drag coefficient, 349
in a channel, 506
Drag on submerged objects, 505
Duldy, 37
Dynamic response, 648
Dynamic similarity, 252

E

Eddy viscosity, 299
Efficiency, 621
Elastic pipe and compressible flow, 572–578
Elemental approach, laminar flow
between parallel plates, 285–286
in a pipe, 278–279
between rotating cylinders, 291–292
Elementary theory
problems dealing with, 640–641
radial flow pumps, 595–600
Elements, 542
Energy concepts, 483–497
energy equation in transitions use, 488–497
flow measurement, 493–496
problems dealing with, 529–532
specific energy, 484–488
total energy, 484
Energy equation, 139–151
compressible flow, 426
definition, 139
flow work, 141
general energy equation, 141–142
kinetic energy correction factor, 146
losses, 142
piezometric head, 143
pressure head, 143
problems dealing with, 192–198
steady nonuniform flow, 145–151
steady uniform flow, 142–145
total head, 143
velocity head, 143
work-rate term, 140
Energy equation in transitions use, 488–497
channel constriction, 488–490
channel entrance with critical flow, 490–492
choked flow, 489
choking condition, 489
energy losses, 492
Energy grade lines, 320–323

Energy losses, 492
English units, 5
Enthalpy, 26
Entrance and developed flow, 276–278
  developed laminar flow, 276
  entrance length, 276
  inviscid core length, 276
  problems dealing with, 332
  profile development region, 276
Entrance length, 276
Entrance region, 276
Entropy, 427
EPNET, 567
EPANET 2 numerical solution, 757–763
Equation for uniform flow, 480–482
Equivalent length, 318
Error, numerical, 700
Eulerian description, 84–85
Euler's equations, 216–219
Excel® solution, chapter 11, 754
Excel® spreadsheet formulas, 755
Exit area, 131
Exit flow, 107
Exosphere, 41
Expansion fan, 462
Expansion waves, 460–463
Extensive property, 23
External flows, 97, 347–423
  boundary-layer theory, 384–408
  drag, 349
  drag coefficient, 349
  flow around immersed bodies, 353–368
  free-stream flow, 351
  lift, 349
  lift and drag on airfoils, 368–372
  lift coefficient, 349
  potential-flow theory, 373–384
  separated region, 349
  separation, 351–353
  velocity defect, 349
  wake, 349

F

Favorable pressure gradient, 352
Fictitious velocity, 396
Finite-difference methods, 688, 693
First law of thermodynamics, 125
  definition, 22, 24
  problems dealing with, 34–35
Fixed cavitation, 365
Fixed control volume, 127, 129
Fixed-grade nodes, 559
Flapped airfoil, 369
Flow
  through a contraction, 105
  external, 347–423
  internal, 275–345
  open channels, 474–539
  piping systems, 541–591
Flow around immersed bodies, 353–368
  added mass, 367–368
  cavitation, 364–366
  drag coefficients, 353–360
  streamlining, 363–364
  vortex shedding, 360–363
Flow coefficient, 657, 661
Flow equations, basic, 373–377
Flow fields
  definition, 85
  problems dealing with, 113–115
Flow meters, 664
Flow measurement, 493–496
  broad-crested weir, 493–494
  discharge coefficient, 493
  nappe, 493
  Parshall flume, 496
  sharp-crested weir, 494–496
  stage, 496
  weir, 493

Flow rate, 133, 655
Flow with outer cylinder fixed, 293–295
Flow work, 141
Flow visualization, 664
Fluctuations, 98
Fluid flows classifications, 95–102
  compressible flow, 102
  developed flow, 96
  external flows, 97
  free stream, 100
  incompressible flow, 101–102
  intermittent flow, 99
  inviscid flow, 96
  laminar flow, 97
  one-dimensional flow, 96
  problems dealing with, 115–116
  Taylor-Conette flow, 98
  three-dimensional flow, 95
  turbulent flow, 97
  two-dimensional flow, 95
  uniform flow, 96
  viscous flow, 96
Fluid mechanics, symbols and
    dimensions
    of quantities, 246
Fluid motion, 84–95
  acceleration, 87–89
  angular velocity, 90
  Eulerian description, 84–85
  flow field, 85
  Lagrangian description, 84–85
  pathline, 85
  streakline, 86
  streamline, 86
  streamtube, 86
  vorticity, 91
Fluid particle, 298
Fluid properties, 13–22, 726–731
  air at atmospheric pressure, 727
  common liquids, atmospheric pressure,
    60 to 70°F
  compressibility, 17–18
  density, 13–14
  ideal gases at 300 K
  kinematic viscosity as function of
    temperature, 731
  standard atmosphere, 728
  surface tension, 18–21
  vapor pressure, 21–22
  viscosity, 14–17
  viscosity as function of temperature,
    730
  water, 726
Fluids
  in motion, 83–95
  at rest, 40–63
Fluid statics, 37–81
  fluids at rest, 40–64
  linearly accelerating containers, 64–65
  pressure at a point, 38–39
  pressure variation, 39–40
  rotating containers, 66–68
Forces
  buoyancy, 58–60
  on curved surfaces, 54–58
  on plane areas, 49–54
  problems dealing with, 73–77
  stability, 61–63
Fourier's law of heat transfer, 227
Francis turbine, 627–628
Free stream, 100
Free-stream flow, 351
Free-stream fluctuations, 98
Free-stream fluctuation intensity, 352
Free-stream turbulence, 98
Free surface, 41
Free-surface flows, 255–259
Free-surface flows classifications, 475–476
  gradually varied flow, 475
  rapidly varied flow, 475
Frictional losses, piping systems, 542–547
Friction factor, 281, 288

Froude number, 252, 476
Fundamental dimensions and their units, 5
Fundamental laws
  incompressible flows, 234, 725
  integral forms, 123–205, 724

G

Gage pressure, 11
Galloping power lines, 361
Gases
  continuum view, 8–10
  definition, 8
Gauss-Legendre formula, 523
Gauss-Legendre quadrature, 523
Gauss-Seidel method, 722
Gauss's theorem, 208
General energy equation, 141–142
General formulation, differential momentum equation, 214–216
Generalized cross section, 486–488
Generalized network equations, 560–561
General momentum equation, 151–152
Geometric similarity, 253
Gradient method, 567
Gradient operator, 210
Gradually varied flow, 475, 509
Guide vanes, 626

H

Hardy Cross method, 563–567
Head-discharge relations—performance curves, 601–602
Head loss, 282
Heat transfer, 142
HEC-RAS River Analysis System, 525
High-Reynolds-number flows, 258
Homogeneous fluid, 220
Homologous units, 611
Horizontal rotation, 66
Hot-wire anemometer, 652
Housing, 594
Hydraulic and energy grade lines, 320–323
Hydraulic bore, 504
Hydraulic depth, 487
Hydraulic grade lines, 320–323
Hydraulic jump, 500–507
  types of, 502
  drag on submerged objects, 505
  hydraulic bore, 504
  stilling basin, 505
  surge, 504
  translating hydraulic jump, 504
Hydraulic radius, 314, 478, 479
Hydraulic smoothness, 301
Hydraulic turbines applications ranges, 645
Hydrofoil, 365–366
Hydrometer, 59
Hydrostatic pressure distribution, 476–477
Hypersonic flow, 430

I

Ideal gases, properties at 300 K, 729
Ideal gas law, 23
Ideal gas properties, 23–24
Idealized hydraulic jump, 501
Idealized radial-flow impeller, 596
Ideal plastics, 16
Index of refraction, 670
Immersed flows, 349
Impeller, 594
Impulse turbine, 625, 632–634
Incompressible flow, 101–102, 210
  fundamental laws, 234, 725
  in inelastic pipe, 570–572
Inertial moment, 180
Inertial reference frame, 89
Infinitesimal control volume, 209
Infinitesimal parallelepiped fluid particle, 90

Initial conditions, 208
Initial-value problem, 208
Inlet area, 107, 130
Inner region, 396
Integral forms of fundamental laws, 123–205, 724
  conservation of mass, 131–139
  energy equation, 139–151
  moment-of-momentum equation, 180–183
  momentum equation, 151–180
  system-to-control-volume transformation, 127–131
  three basic laws, 124–127
Integrands, 133, 208
Intensive property, 23
Intermittent flow, 99
Internal flows, 275–345
  developed flow, 276–278
  entrance flow, 276–278
  laminar flow between parallel plates, 285–291
  laminar flow between rotating cylinders, 291–295
  laminar flow in a pipe, 278–284
  turbulent flow in a pipe, 295–326
  uniform turbulent flow in open channels, 326–329
Internal friction, 142
Internal inviscid flows, 105
International System, 6
Interior nodes, 559
Inviscid core length, 276
Inviscid flow, 96
Ionosphere, 41
Irregular channels, 524–525
Irrotational flows, 89
Irrotational vortex, 378
Isentropic compressible-flow tables for air, 733–735
Isentropic expansion waves, 460–463
  expansion fan, 462
  Prandtl-Meyer function, 462
Isentropic flow
  problems dealing with, 35
Isentropic nozzle flow, 431–441
  choked flow, 435
  critical area, 434
  diffuser, 433
  nozzle, 433
  pressure recovery factor, 437
  problems dealing with, 466–468
Isentropic process, 27
Isoefficiency curve
  Francis turbine, 629
  Pelton turbine, 635
Isotropic fluids, 220
Isotropic Newtonian fluids, 243–244

J

Joukowsky equation, 574
Junctions, 559

K

Karman vortex street, 360
Kinetic-energy correction factor, 146
Kinetic pressure, 262
Kinematic similarity, 253
Kinematic viscosity, 16
Kinematic viscosity as function of temperature properties, 731
Kinetic energy correction factor, 146
Kinetic pressure, 262
Knock, 361
Kutta-Joukowsky theorem, 383

L

Lagrangian description, 84–85
Laminar and turbulent boundary layers
  problems dealing with, 421

Laminar-boundary equations, 401–405
approximate solution, 388–392
problems dealing with, 422
Laminar flow, 97
Laminar flow between parallel plates, 285–291
Couette flow, 286
elemental approach, 285–286
friction factor, 288
Navier-Stokes equation, laminar flow between parallel plates, 286–287
problems dealing with, 334–336
simplified flow situation, 287–291
Laminar flow between rotating cylinders, 291–295
elemental approach, 291–292
flow with outer cylinder fixed, 293–295
Navier-Stokes equation, laminar flow between rotating cylinders, 292–293
problems dealing with, 337
Laminar flow in a pipe, 278–284
Darcy–Weisbach equation, 281
elemental approach, 278–279
friction factor, 281
Navier-Stokes equation solutions, 279–280
pipe flow quantities, 280–285
Poiseuille flow, 279
problems dealing with, 333–334
Laminar portion, 394
Laminar profile, 386
Laplace's equation, 372–373
Leibnitz's rule, 499
Lift, 349
Lift and drag on airfoils, 368–372
problems dealing with, 414–415
wingspan, 370
Lift coefficient, 349
Linearization of system energy equations, 562–563
Linearly accelerating containers, 64–65
problems dealing with, 80
Line of action determination, 180
Liquids
continuum view, 8–10
definition, 8
Liquids, common, atmospheric pressure properties, 60 to 70°F, 729
Local acceleration, 88
Local Reynolds number, 385
Local skin-friction coefficient, 390
Loss coefficients, 143, 146
conical expansion, 315
fitting, 315
Losses, 142
in channels, 492
in piping systems, 542–546
in developed pipe flow, 307–313
in noncircular conduits, 314
Low-Reynolds-number flows, 348

M

Mach number, 102
Mach waves, 430, 460–463
Manning *n*, 327
Manning relation, 480
Manometers, 45–49
capabilities, 47
definition, 45
problems dealing with, 71–73
types, 46, 649
Matching pumps to system demand, 619–620
Material derivative, 88
Mean free path, 9
Mesophere, 41
Metacentric height, 61
Metastable equilibrium, 453
Meters
elbow, 660
open-channel, 664

orifice, 658
target, 662
turbine, 661
venture, 660
vortex shedding, 663
Microhydro, 637
Micromanometer, 46
Minihydro, 637
Minor losses in pipe flow, 315–320
problems dealing with, 340–341
Mixed-flow pumps, 595, 602–606
Mixing length, 299
Moment-of-momentum equation, 126, 180–183
line of action determination, 180
problems dealing with, 205
Momentum and energy
problems dealing with, 204
Momentum concepts, 497–508
hydraulic jump, 500–507
momentum equation, 497–500
numerical solution of momentum equation, 507–508
problems dealing with, 532–533
Momentum correction factor, 176
Momentum equation, 151–180, 426, 497–500
aerodynamic analysis of rotating wind-turbine blade, 172–176
conjugate depth, 498
control-volume analysis of wind turbines, 166–172
deflectors, momentum equation applied to, 158–165
general momentum equation, 151–152
noninertial reference frames, 178–180
problems dealing with, 198–204
propellers, momentum equation applied to, 165–166
sequent depth, 498
steady nonuniform flow, 176–178
steady uniform flow, 152–158
transition region, 499–500
Momentum function, 498
Momentum thickness, 388
Moody diagram, 313, 314
Most efficient section, 482–483
Motivation, 243–244
Moving deflectors, 159
Multistage pumps, 622–625

N

Nappe, 493
Navier-Stokes equation, laminar flow
between parallel plates, 286–287
between rotating cylinders, 292–293
in a pipe, 279–280
Navier-Stokes equations, 219–222
Negative pressure gradient, 405
Net positive suction head (NPSH), 602
Network analysis using generalized computer software, 567–570
Newtonian fluids, 16, 220
Newton's second law, 6, 22, 125–126
Noncircular conduits losses, 314
Nonhomogeneous flows, 211
Noninertial reference frame, 89, 178–180
Nonisotropic fluids, 243
Non-Neutonian fluids, 16
Nonuniform flow, 145–151, 176–178, 474
Nonuniform gradually varied flow, 509–517
celerity, 514
controls and critical flow, 514–515
differential equation for gradually varied flow, 509–511
problems dealing with, 534–539
profile synthesis, 515–517
water surface profiles, 511–514
Nonuniform velocity profiles, 133
Normal depth, 480

Normalized differential equations, 261–264
kinetic pressure, 262
problems dealing with, 272–273
Normalized problem, 263
Normal-shock compressible-flow tables for air, 735–739
Normal shock wave, 441–448
problems dealing with, 469
shock wave, 442
Normal stress, 8, 215
Normal vector, 128
No-slip condition, 16
Nozzle, 433
Numerical
convergence, 704
errors, 704
methods, 693
stability, 701
Numerical analysis, water surface profiles, 517–527
direct integration methods, 525–527
irregular channels, 524–525
numerical integration method, 523–524
standard prep method, 518–522
Numerical integration method, 523–524
Numerical solution of momentum equation, 507–508
Numerical solutions
chapter 10, 742–748
chapter 11, 749–763

O

Oblique shock wave, 455–460
deflection angle, 456
problems dealing with, 470–471
wedge angle, 456
One-dimensional flow, 96
Open-channel flow, 474–539
classification of free-surface flows, 475–476
energy concepts, 483–497
free surface, 474
Froude number, 476
hydrostatic pressure distribution, 476–477
momentum concepts, 497–508
nonuniform gradually varied flow, 509–517
numerical analysis, water surface profiles, 517–527
problems dealing with, 344–345
uniform flow, 477–483
Operating point of the system, 324
Outer region, 301, 396

P

Parabolic profile, 175–176
Paraboloid of revolution, 67
Parallel piping, 550–553
Parshall flume, 496
Pathline, 85
Pelton impulse turbine, 634
Performance curves, 601–602
Periodic flows, 260–261
Persistence of irrotationality, 224
Physical quantities, 4–8
problems dealing with, 30–31
Piezometer, 104
Piezometric head, 104, 143
Pipe elements, frictional losses, 542–547
Pipe equation, 310
Pipe flow quantities, 280–285
Pipe network analysis, 558–570
EPNET, 567
fixed-grade nodes, 559
generalized network equations, 560–561

gradient method, 567
Hardy Cross method, 563–567
interior nodes, 559
junctions, 559
linearization of system energy equations, 562–563
network analysis using generalized computer software, 567–570
pseudoloop, 559
Piping system flow, 541–591
components, 542
elements, 542
frictional losses, 542–547
pipe network analysis, 558–570
simple pipe systems, 547–558
unsteady flow in pipelines, 570–578
Pitot probe, 104
Pitot-static probe, 104
Plane areas, 49–54
problems dealing with, 73–76
Plane flow, 95
Poiseuille flow, 279
Positive pressure gradient, 404
Positive surge waves, 504
Potential-flow theory, 373–384
numerical solution, 709
analytic function, 375
basic flow equations, 373–377
circulation, 378
complex velocity potential, 375
double strength, 378
simple solutions, 378–380
source strength, 378
superposition, 381–384
vortex strength, 378
Potential function, 373
Power-law profile, 304
Prandtl boundary-layer equation, 402
Prandtl-Meyer function, 462
Prandtl–Meyer function compressible-flow tables for air, 740–741
Pressure, 10
absolute, 11
at a point, 38–39
gage, 11
in atmosphere, 41–42
in liquids at rest, 41
problems dealing with, 31, 70–71
scales, 10–12
stagnation, 104
static, 104
variation, 39–40
Pressure-gradient effects, 405–408
problems dealing with, 423
Pressure head, 143
Pressure measurement, 649
Pressure recovery factor, 437
Pressure transducers, 650
Profile development region, 276
Profile synthesis, 515–517
Propeller efficiency, 166
Propellers, momentum equation applied to, 165–166
Properties
areas, 732
fluid, 726–731
volumes, 732–733
Pseudoloop, 559
Pseudoplastics, 16
Pump characteristic curves, 323, 619
Pump-driven flow, 554
Pump head, 145
Pump housing, 594
Pumps in parallel, 620
Pumps in series, 620–622

Q

Quasi-equilibrium, 26
Quasi-static process, 26

R

Radial flow pumps, 595–602
brake power, 601
centrifugal pump, 595
elementary theory, 595–600
head-discharge relations—performance curves, 601–602
Rankine-Hugoniot, 469
Rapidly varied flow, 475
Rate-of-energy transfer, 138
Rate-of-strain tensor, 92
Ratio of specific heats, 26
Rayleigh-pitot-tube formula, 452
Reaches, 542
Reaction turbine, 625, 626–632, 632–634
Rectangular sections, 484
Regression analysis, 678
Regular section, 477
Relative roughness, 301
Repeating variables, 246
Representative controls, 514
Resistance coefficient, 542
Resultant force, 51
Reversible pump/turbine units, 638
Reynolds number, 99
Reynolds stress, 657
Reynolds transport theorem, 130
Rheology, 9
Rocket, 178
Rotating containers, 66–68
problems dealing with, 81
Rotating cylinders, 291–295
Rough pipe, 302
Runner, 625

S

Scalar potential function, 375
Second coefficient of viscosity, 220
Selection and operation of turbines, 634–639
Self-similar, 396
Semicircular arc, streamlines, 100
Separated flows
problems dealing with, 410–412
Separated region, 106, 349
Separation, 351–353
adverse pressure gradient, 352
chord, 351
favorable pressure gradient, 352
free-stream fluctuation intensity, 352
stall, 351
Sequent depth, 498
Series piping, 547–550
Shaft work, 141
Sharp-crested weir, 494–496
Shear stress, 8, 215
Shear velocity, 302, 396
Shear work, 141
Shock waves
converging-diverging nozzles, 448–453
definition, 430, 442
normal, 441–448
oblique, 455–460
Shroud, 593
Similarity rules, 614–616
Similitude, 252–264
compressible flows, 260
confined flows, 254–255
definition, 243, 252
dynamic similarity, 252
free-surface flows, 255–259
geometric similarity, 253
high-Reynolds-number flows, 258
kinematic similarity, 253
periodic flows, 260–261
problems dealing with, 269–271
Simple piping systems, 547–558
branch piping, 553–558
parallel piping, 550–553
problems dealing with, 341–344

with pump, 324–326
series piping, 547–550
Simple solutions, 378–380
Simplified flow situation, 287–291
SI (Systeme International) units, 5
Skin friction coefficient, 390
Slider valve, flow, 243
Slots, 370
Smooth pipe, 302, 304
Smooth wall, 301
Sound wave, 428
Source strength, 378
Specific discharge, 484
Specific energy, 125, 484–488
alternate depths, 485
critical depth, 485
critical energy, 485
definition, 484
generalized cross section, 486–488
hydraulic depth, 487
rectangular sections, 484
specific discharge, 484
subcritical flow, 486
Specific gravity, 13
Specific speed, 616–619
Specific weight
definition, 13
problems dealing with, 31–32
Speed of sound and Mach number, 27, 427–431
bulk modulus, 429
hypersonic flow, 430
problems dealing with, 35, 465–466
shock wave, 430
sound wave, 428
supersonic flow, 430
zone of silence, 430
problems dealing with, 35
Sphere, 355
Sprinkler, 181
Stability
numerical, 699
demonstration of, 61–63
problems dealing with, 79
Stage, 496
Stage-discharge curve, 496
Stagnation point, 95
Stagnation pressure, 104
Stagnation quantities, 433
Stall, 106, 351
Standard atmosphere, 41–44
Standard atmosphere, properties, 728
Standard atmospheric conditions, 9
Standard step method, 518–522
Strain rate, 14
Static pressure, 104
Stationary deflector, 159
Steady flow, 85
Steady nonuniform flow, 145–151, 176–178
Steady uniform flow, 142–145, 152–158
Stilling basin, 505
Stokes hypothesis, 220
Strain rate, 14
Stratified flows, 211
Stratosphere, 41
Stratosphere, 42
Steady flows
uniform, 142
problems dealing with, 579–590
Streakline, 86
Stream function, 374
Streamline, 86
Streamlining, 363
problems dealing with, 413
Streamtube, 86
Streamwise-component momentum equation, 428
Stress vector, 8
Strouhal number, 248, 252, 261, 263
Subcritical flow, 486

Submerged body, 58
Submerged objects, drag, 506
Subsonic flow, 430
Substantial derivative, 88
Substantial, derivative, acceleration, and vorticity in rectangular, cylindrical, and spherical coordinates, 723
Suction specific speed, 618
Supercavitation, 365
Superimposition of simple flows
  problems dealing with, 416–418
Superposition, 381–384
Supersaturation, 453
Supersonic flow, 430
Supersonic nozzle, 434, 438
Surface tension
  definition, 18–21
  problems dealing with, 33–34
Surge, 504
Surging, 570
Swamee-Jain equation, 545
Swept-back airfoils, 370
System, 22, 124
System demand curve, 324, 619
System energy equations linearization, 562–563
System-to-control-volume transformation, 127–131
  control surface, 127
  differential volume elements, 129
  problems dealing with, 187
  Reynolds transport theorem, 130

T

Tangential force, 8
Taylor-Conette flow, 98
Temperature
  problems dealing with, 31
  scales, 10–12
Theoretical head curve, 598, 601
Thermal conductivity, 227
Thermal diffusivity, 229
Thermodynamic properties and relationships, 23–28
  first law of thermodynamics, 24–25
  ideal gas, 23–24
Thermodynamic quantities, 25
Thoma cavitation number, 609
Three basic laws, 124–127
  conservation of mass, 125
  first law of thermodynamics, 125
  Newton's second law, 125–126
Three-dimensional flow, 95
Three-dimensional stress components, 215
Time average, 296
Time derivative, 87, 130
Torque, 294
Total energy, 484
Total head, 104, 143
Total pressure, 104
Trailing vortex, 371
Transducers, 650
Transition region, 499–500
Transition zone, 308
Translating hydraulic jump, 504
Trapezoidal channel, 491, 520
Trapezoidal cross section, 483
Trapezoidal section, 477
Traveling cavitation, 364
Triangular channel, 487
Troposphere, 40
T-section energy equation, 145
Turbines, 625–639
  axial-flow turbine, 630
  cavitation considerations with turbines, 630–632
  Francis turbine, 627–628
  guide vanes, 626
  impulse turbine, 625
  microhydro, 637
  minihydro, 637
  problems dealing with, 644–645

reaction turbine, 625, 632–634
reaction turbines, 626–632
runner, 625
selection and operation of, 634–639
velocity coefficient, 633
wicket gates, 626
Turbomachinery, 593–645
dimensional analysis and similitude, 610–619
turbines, 625–639
turbopumps, 594–610
turbopumps in piping systems, 619–625
Turbomachinery similarity rules, 614
Turbopumps, 594–610
axial flow pump, 595
axial pumps, 602–606
casing, 594
cavitation in turbomachines, 606–610
definition, 594
housing, 594
impeller, 594
mixed-flow pumps, 595, 602–606
problems dealing with, 642–644
radial flow pumps, 595–602
Turbopumps in piping systems, 619–625
best operating point, 620
design discharge, 620
design head, 620
efficiency, 621
matching pumps to system demand, 619–620
multistage pumps, 622–625
pumps in parallel, 620
pumps in series, 620–622
system demand curve, 619
Turbulence, 98
Turbulent boundary layer
empirical form, 396–401
power-law form, 392–396
Turbulent flow, 97
Turbulent flow in pipes and conduits, 295–326
apparent shear stress, 298
buffer zone, 302
Colebrook equation, 310
completely turbulent regime, 308
correlation coefficient, 300
critical zone, 308
differential equation, 297–301
equivalent length, 318
hydraulic and energy grade lines, 320–323
hydraulic smoothness, 301
losses in developed pipe flow, 307–313
losses in noncircular conduits, 314
minor losses in pipe flow, 315–320
mixing length, 299
Moody diagram, 313, 314
operating point of the system, 324
outer region, 301
power-law profile, 304
problems dealing with, 339–340
relative roughness, 301
shear velocity, 302
simple pipe system with pump, 324–326
system demand curve, 324
transition zone, 308
turbulent shear stress, 298
velocity profile, 301–307
vena contracta, 318
viscous length, 302
wall region, 301
wetted perimeter, 314
Turbulent profile, 386
Turbulent regime, equation, 309
Turbulent region, 302
Turbulent shear stress, 298
Turbulent velocity profile, 304
Turbulent zone, 396
Two-dimensional flow, 95
Two-dimensional stress components, 214
Two-dimensional velocity profile, 496

U

Uncertainty analysis, 673
Uniform depth, 480
Uniform flow, 96, 477–483
  channel geometry, 477–479
  Chezy-Manning equation, 480
  equation for uniform flow, 480–482
  hydraulic radius, 479
  Manning relation, 480
  most efficient section, 482–483
  normal depth, 480
  problems dealing with, 528–529
  regular section, 477
  uniform depth, 480
  wetted perimeter, 478
Universal gas constant, 23
Uniform turbulent flow in open channels, 326–329
  Chezy coefficient, 327
  Chezy equation, 327
  Chezy-Manning equation, 327
  Darcy–Weisbach equation, 326
  Manning *n*, 327
  problems dealing with, 337–338
Units, 4–8
  problems dealing with, 30–31
Units, conversions, mathematical relationships, 721–725
  conversions, 722
  fundamental laws for incompressible flows, 725
  integral forms of fundamental laws, 724
  substantial, derivative, acceleration, and vorticity in rectangular, cylindrical, and spherical coordinates, 723
  U.S. engineering units, SI units, and conversion factors, 721–722
  vector relationships, 722–723
Unsteady flow in pipelines, 570–578
  compressible flow in elastic pipe, 572–578
  incompressible flow in inelastic pipe, 570–572
  Joukowsky equation, 574
  problems dealing with, 591
  surging, 570
  water hammer, 570, 572
Unswept airfoil, 370
U.S. engineering units, SI units, and conversion factors, 721–722
U-tube manometer, 46

V

Vacuum, 11
Valve closure, rapid, 575–77
Vanes, 160–161
Vapor flow through a nozzle, 453–455
  metastable equilibrium, 453
  problems dealing with, 470
  supersaturation, 453
Vapor pressure
  definition, 21–22
  problems dealing with, 34
Variation in pressure, 39–40
Vector relationships, 722–723
Velocimeter, 654
Velocimetry, 666
Velocity coefficient, 633
Velocity defect, 349, 396
Velocity head, 143
Velocity profile, 301–307
Vena contracta, 318
Velocity measurement, 651
Vertical stability, 61
Velocity potential function, 373
Vibration, 363
Vibratory cavitation, 365

Viscometer, 15
Viscosity
  definition, 14
  as function of temperature properties, 730
  problems dealing with, 32–33
Viscous drag, 257
Viscous effects, 84, 106
  boundary layer, 384
  vorticity changes, 217
Viscous flow, 96
Viscous length, 302
Viscous shear, 297
Viscous wall layer, 297, 396
  turbulence initiated, 297
V-notch weir, 495
Volume properties, 732
Volumes, 732–733
Volute, 594, 626
Von Kármán integral equation, 386
  problems dealing with, 419–420
Von Kármán integral number, 386–388
Vortex cavitation, 365
Vortex flow, 98, 382
Vortex line, 224
Vortex tube, 224
Vortex shedding, 360
  problems dealing with, 413
Vortex strength, 378
Vorticity, 91
Vorticity equations, 223–226, 373
  problems dealing with, 239
Vorticity, velocity potential, and stream functions
  problems dealing with, 415–416

W

Wake, 349
Wall region, 301
Water hammer, 570, 572
Water properties, 726
Water surface profiles, 511–514
Wave drag, 257
Weber number, 250, 251, 264
Wedge angle, 456
Weight, 7
Weir, 493
Wetted perimeter, 314, 478
Wicket gates, 626
Wind turbines, 166
Wind-tunnel airspeed, 260
Wind-turbine blade analysis, 172
Wingspan, 370
Work-rate term, 140

Z

Zero-drag result, 382
Zone of silence, 430
