CONTENTS

Chapter 1 Introduction	1
1.1 Study Object	1
1.2 Study Content	2
1.3 Purpose	3
Chapter 2 Structural Analysis of Planar Mechanisms	4
2.1 Planar Kinematic Pairs and Planar Mechanisms	4
2.2 The Kinematic Diagram of a Mechanism	6
2.3 Degree of Freedom of a Mechanism	12
2.4 Points for Attention during the Calculation of DOF	15
2.5 The Composition Principle and Structural Analysis	19
Problems and Exercises	23
Chapter 3 Kinematic Analysis of Mechanisms	26
3.1 Tasks and Methods of Kinematic Analysis	26
3.2 Velocity Analysis by the Method of Instant Centres	26
3.3 Kinematic Analysis by Analytical Methods	31
Problems and Exercises	39
Chapter 4 Planar Linkage Mechanisms	43
4.1 Characteristics of Planar Linkage Mechanisms	43
4.2 The Types of Four-bar Linkages	44
4.3 Characteristics Analysis of Four-bar Linkages	48
4.4 Dimensional Synthesis of Four-bar Linkages	56
Problems and Exercises	65
Chapter 5 Cam Mechanisms	72
5.1 Characteristics and Classification of Cam Mechanisms	72
5.2 Follower Motion Curves	75
5.3 Plate Cam with Translating Roller (or Knife-edge) Follower	81
5.4 Plate Cam with Oscillating Roller Follower	93
5.5 Plate Cam with Translating Flat-faced Follower	97
* 5.6 Plate Cam with Oscillating Flat-faced Follower	99
Problems and Exercises	102
Chapter 6 Gear Mechanisms	107
6.1 Types of Gear Mechanisms	107
6.2 Fundamentals of Engagement of Tooth Profiles	109
6.3 The Involute and Its Properties	110

6.4	Standard Involute Spur Gears	
6.5	Gearing of Involute Spur Gears	
6.6	Contact Ratio of an Involute Spur Gear Set	
6.7	Manufacturing Methods of Involute Profiles	
6.8	Addendum Modification on Involute Gears	
6.9	Helical Gears for Parallel Shafts	
6.10	Worm Gearing	
6.11	Bevel Gears	
	Problems and Exercises	
Chapter 7 Gear Trains		
7.1	Gear Trains and Their Classification	
7.2	Train Ratio of a Gear Train with Fixed Axes	
7.3	Train Ratio of Elementary Epicyclic Gear Train	
7.4	Train Ratio of a Combined Gear Train	
7.5	Applications of Gear Trains	
7.6	Mechanical Efficiency of Planetary Gear Trains	
7.7	Tooth Numbers of Gears and Number of Planet Gears	
7.8	Introduction to Other Kinds of Planetary Gear Trains	
	Problems and Exercises	
Chapter 8 Other Mechanisms in Common Use		
8.1	Ratchet Mechanisms	
8.2	Geneva Mechanisms	1
8.3	Cam-Type Index Mechanisms	
8.4	Universal Joints	1
8.5	Screw Mechanisms	
	Problems and Exercises	1
Chapter 9 Combined Mechanisms		
9.1	Introduction	
9.2	Methods for the Classification of Combined Mechanisms	1
9.3	Series Combined Mechanisms	
9.4	Parallel Combined Mechanisms	1
9.5	Compound Combined Mechanisms	1
9.6	Multiple Combined Mechanisms	
9.7	Feedback Combined Mechanisms	
9.8	Mixed Combined Mechanisms	
9.9	Matters Needing Attention	1
	Problems and Exercises	1
Chapter 10 Balancing of Machinery		
10.1	Purposes and Methods of Balancing	1
10.2	Balancing of Disk-like Rotors	
10.3	Balancing of Non-disk Rigid Rotors	1

10.4 Unbalancing Allowance of Rotor	204
Problems and Exercises	205
Chapter 11 Motion of Mechanical Systems and Its Regulation	208
11.1 Introduction	208
11.2 Motion Equation of a Mechanical System	208
11.3 Solution of the Motion Equation of a Mechanical System	212
11.4 Periodic Speed Fluctuation and its Regulation	215
11.5 Introduction to Aperiodic Speed Fluctuation and its Regulation	219
Problems and Exercises	220
Chapter 12 Creative Design of Mechanism Systems	222
12.1 Introduction to Design of Mechanism Systems	222
12.2 Creative Thinking and Creative Methods	224
12.3 Kinematic Parameters of the System	227
12.4 Selection of Mechanisms	228
12.5 Cooperation of Working Links	230
12.6 Evaluation of the Mechanism System	233
12.7 Design Example of a Mechanism System	234
Vocabulary	239
References	245
前言	247
