Abstract *should be in italics*

The purpose of this study is to correlate the performance in selected major CA subjects ~~and their relation to the~~ performance in the mock board examination in Tariff Law. The participants of the study were the 121 Customs Administration graduates of 2005. The data needed for the study were obtained from the Dean's Office and the Program Head of the Customs Administration Program. Descriptive statistics used were means and standard deviation. Inferential statistics used were One-Way Analysis of Variance (ANOVA) and the Pearson r set at .05 level. Results showed that the performance in the mock board examination in Tariff Law among students was "moderately low" when taken as an entire group. Significant differences

existed in the students' performance in the mock board examination in Tariff Law when classified as to CA 6, TAR 3, TAR 4, and TAR 5. However, no significant difference existed when they were classified as to TAR 2. Finally, positive and significant relationship existed among the variables.
