Abstract

This investigation was undertaken to determine the Students' Evaluation of the New School Uniform. The respondents of the study were the 175 randomly selected freshman students of the College of Business of JBLFMU-Molo. A validated researchers-made questionnaire was used to gather the data needed for this study. The data gathered were subjected to descriptive statistics such as mean, standard deviation, percentage and frequency. The inferential statistics used in this study were Kruskal-Wallis Test and Mann-Whitney U-Test. The study revealed that regardless of the students' sex, type of residence and program of study, the students are in "favor" of the new school uniform. And when the new school uniform's workmanship, materials, fitness and design, and accessories were looked into, a significant difference was found on the students' evaluation.
