SUSTAINABLE LOGISTICS AND SUPPLY CHAIN MANAGEMENT

3RD EDITION

**PRINCIPLES AND PRACTICES FOR
SUSTAINABLE OPERATIONS AND MANAGEMENT**

Third Edition

Sustainable Logistics and Supply Chain Management

Principles and practices for sustainable
operations and management

David B Grant, Alexander Trautrimis
and Chee Yew Wong

CONTENTS

List of figures and tables ix

About the authors xi

Foreword xiii

Introduction 1

01 Logistics and supply chain management 7

The nature of logistics and supply chain management 7

Logistics and SCM trends affecting sustainability 11

Sustainable logistics and supply chains 18

Summary 26

References 27

02 The science of sustainability 31

Concepts of sustainability 31

Species and ecosystems 33

Energy 38

Industry 41

Food 44

Population and urban growth 46

Water 48

Summary 50

References 50

03 Freight transport 53

Introduction 53

The impact of freight transport 54

Transport modes 56

Strategies to reduce the environmental impact of freight transport 60

Wider aspects of sustainability in freight transport 74

Summary 75

References 76

- 04 Sustainable warehousing 81**
Introduction 81
The environmental impact of warehouses 81
The roles and functions of warehouses 82
Warehouse locations 85
Handling equipment 86
Assessing the impact 87
Reduction of environmental impact 91
Social dimension of sustainability in warehousing 100
Risks and vulnerability in warehousing 102
Summary 105
References 106
- 05 Product design, cleaner production and packaging 109**
Background 109
Product design for environment and sustainable logistics 111
Selection of materials 113
Cleaner production 120
Packaging for the environment 131
Sustainable consumption and logistics 136
Regulatory frameworks 139
Summary 145
References 146
- 06 Sustainable purchasing and procurement 149**
Introduction 149
The role of procurement in the supply chain 150
What is sustainable procurement? 152
Drivers and barriers for sustainable procurement 155
Procurement frameworks 159
Sustainability labels and certifications 161
Lifecycle assessment 165
System boundaries 167
Comparing purchasing options 169
Summary 170
References 171

- 07 Reverse logistics and recycling 175**
Background 175
The circular economy and regulations 178
Product recovery options 180
Reverse logistics and recycling 190
Recycling 197
Summary 204
References 205
- 08 Risk, resilience and corporate social responsibility 209**
Background 209
Risk and resiliency in logistics and supply chains 211
Corporate social responsibility 228
Ethical framework and code of conduct 235
Global and industrial initiatives 241
Summary 246
References 247
- 09 Sustainable logistics and supply chain management strategy 251**
Concepts of corporate strategy 251
Theoretical motivations underlying corporate and sustainable strategy 255
Sustainable logistics and supply chain performance measurement 261
Environmental management systems 262
Lifecycle assessment 265
Assessing sustainable choices and initiatives 268
Summary 275
References 276

INDEX

Bold page numbers indicate figures; *italic* numbers indicate tables.

- Abukhader, SM 18
- accidents, freight transport and 55
- accountability of supply chains 149, 152
- acids 114
- adaptation finance as COP26 goal 32
- adaptation of sustainable practices 156
- administrative issues 23, 24, 25–26
- aerodynamic profiling 69
- 'agile' and 'lean' paradigms 14–15, 16
- agriculture 150–151
- air freight 57
 - alternative fuels 71–72
- Aldi 135
- alkalis 114
- Alnatura, Germany 99–100
- alternative fuels 63–67, 65
- Amazon 119
- amoral managers 238
- anaerobic digestion 267–268
- anticipatory competencies 258
- Apple 118–119, 245–246
- arsenic 114
- asbestos 114
- ASDA 135
- asset specificity 256
- atomic sources of risk 212
- auditing schemes 161–165
- automation in warehouses 86–87
- autonomous vehicles 73–74

- backhauling 68–69
- barbecues, charcoal *versus* liquified petroleum gas (LPG) 168–169
- biofuel 21, 40, 63–64, 71–72
- biomass generation of electricity 64
- Bluesign system 127
- BMW 189
- Body Shop 239–241
- Böge, S 19
- bounded rationality 255
- bow-tie risk management analysis 274, 274–275
- Brexit 83
- Brundtland, GB 31, 33
- Building Research Establishment Environmental Assessment Method (BREAM) 87–88, 88

- buildings
 - energy use 40–41
 - 'greening' of logistics and SCM 22
 - see also* warehouses

- cadmium 114
- campaigning groups as drivers 158
- Campbell, C 38
- Canada, Great Golden Horseshoe (GGH) 36–37
- cannibalization of used products 182
- carbon emissions
 - air freight 57, 57
 - assessment of 21
 - business case for reduction of 264
 - COP26 goal 32
 - food 10–11
 - food production 151
 - freight transport 57 59–60
 - Kyoto Protocol 35
 - pipelines 57
 - road freight 57
 - sea freight 56, 57, 59–60
 - storage, economic value of 36–37
 - warehouses 21
- carbon storage, economic value of 36–37
- Carbon Trust 163
- Carter, CR 18, 260
- Ceres Principles 243
- certainty effect 221
- certifications
 - cleaner production and 129–130
 - procurement 161–165
 - voluntary 140
 - see also* standards
- channel postponement 15
- charcoal *versus* liquified petroleum gas (LPG) 168–169
- charges on less sustainable products 136
- child labour 210, 234
- chocolate industry 233–235
- chromium 115
- Circular Economy Action Plan 141
- circular economy (CE) 20–21, 111–112, 175–176
 - regulations 178–180
- cities, access restrictions in 73

- cleaner production 111, 120–130, 121
- climate change
- food insecurity 44
 - greenhouse effect 34–36
 - historical impacts of 34
 - Intergovernmental Panel on Climate Change (IPCC) 35
 - internal and external variabilities 33
 - water 49
- Cline, EH 34
- clinical wastes 115
- closed loop systems 24, 186, 187, 191, 192, 195
- Coca-Cola 135
- codes of conduct 238–239, 244–245
- suppliers 26
- CO₂ emissions
- air freight 57, 57
 - assessment of 21
 - business case for reduction of 264
 - COP26 goal 32
 - food 10–11
 - food production 151
 - freight transport 57, 59–60
 - Kyoto Protocol 35
 - pipelines 57
 - road freight 57
 - sea freight 56, 57, 59–60
 - storage, economic value of 36–37
 - warehouses 21
- collaboration, increased 12–13
- collection schemes 184
- ColorZen 125
- communication outages 212
- communications technology 13–14
- competencies in sustainability 257–258, 258–259
- competitive risk(s) 213
- competitors as drivers 158
- confirmation bias 218
- congestion 72
- congestion charge zone 73
- consequential theories of ethics 236
- consignment factors 59–60
- consolidation centres, warehouses as 84
- construction industry
- modern slavery 154–155
 - waste from 179–180
- construction phase of warehouses 91–93
- constructive adaptation 156
- container shipping 12, 61, 253–255
- contracting process 22
- COP26 goals 32–33
- corporate social responsibility (CSR)
- chocolate industry 233–235
 - defined 228–230
 - economic/ethical responsibilities 232
 - global and industrial initiatives 241–246
 - profit 232
 - pyramid of responsibilities 230
 - reporting initiatives 242–243
 - sustainability and 31–32
 - trade-off issues 230, 232
 - types of responsibilities 231
- corporate strategy
- assessment of choices and initiatives 268–275, 274
 - competencies in sustainability 257–258, 258–259
 - container shipping 253–255
 - criteria for environmental management 269–273, 274
 - defined 251
 - environmental concerns 253
 - framework for environmental problems 273–275
 - levels of corporate planning 251–252
 - logistics/SCM examples 253
 - natural resource-based view (RBV) of the firm 257
 - performance management 261–262
 - resource-based view (RBV) of the firm 256–257
 - theoretical motivations underlying 255–261
 - transaction cost economics (TCE) 255–256
 - triple bottom line (TBL) concept 258–260, 260
- costs
- concerns over as barrier 157
 - freight transport 58
 - reduction of as driver 155
- cotton 18
- Covid-19 pandemic
- container shipping 255
 - freight transport and 63
 - warehouses 83
- cross-docking 83
- customers
- as drivers 158
 - return of used products 183
- cyanide 115
- cyber breach/attacks 214–215, 218
- DAPSI(W)R(M) method 273–274, 274, 275
- data centres 103–104
- DeGeorge, RR 237
- delivery drivers 55
- Dell 190

- demand risk(s) 213
- dematerialization 24
- demolition waste 179–180
- depletion issues for industry 43–44
- deposit fees 184
- design
 - circular economy 111–112
 - design for environment (DfE) 111, 112, 112
 - Eco-Design Directive 140
 - 'greening' of logistics and SCM 23
 - hazardous materials 114–116, 117–119, 120
 - importance of, growing evidence of 109
 - integrated, for the environment 117–119
 - pollution prevention 110
 - products 111–120, 112, 114–116
 - of products and packaging 23
 - product stewardship 110–111
 - selection of materials 113, 114–116, 117–120
 - sourcing of materials 120
 - sustainable consumption and 136–137
 - vehicles 69
 - warehouses 82
- developing world
 - economic growth in 41–42
 - offshoring to 42, 62
 - pollution prevention 110
- development, sustainable 47–48
 - framework for 110–111
- dimethyl fumarate (DMFu) 115
- disasters, impact on warehouses 103
- Dowell, G 257
- driverless vehicles 73–74
- drivers, monitoring of 70
- drivers of freight transport 55
- Drucker 230
- durable products 137–138
- DyeCoo 125
- dyeing textiles industry 124–125
- eco-design 111–120, 112, 114–116
- Eco-Design Directive 140
- eco-efficiency
 - aspects of 23, 24
 - cleaner production and 122
- Eco-Management and Audit Scheme (EMAS) 129–130, 263
- e-commerce 16–17
- economic impact of natural environment 36–37
- economic value of reverse logistics 185
- ecosystems 33–37
- 'efficient customer response' 58–59
- electricity, biomass generation of 64
- Electronic Industry Code of Conduct (EICC) 244–245
- electronics waste
 - recycling 198
 - regulations 179
- Elkington, J 258
- Elliott, M 269
- embedded impact of warehouses 90, 91–92
- emissions
 - air freight 57, 57
 - assessment of 21
 - business case for reduction of 264
 - COP26 goal 32
 - food 10–11
 - food production 151
 - freight transport 57, 59–60
 - Kyoto Protocol 35
 - pipelines 57
 - road freight 57
 - sea freight 56, 57, 59–60
 - storage, economic value of 36–37
 - warehouses 21
- empty running 68–69
- energy
 - as area related to sustainability 38–41
 - freight transport consumption 54
 - wind energy 270–273
- environment, impact on logistics
 - management 18–19
- environmental, social and governance (ESG)
 - information, reporting of 23, 25
- environmental improvement targets 130
- environmental management systems (EMS) 129–130, 163–164, 262–265
- environment condition indicators (ECIs) 263
- ethics
 - Body Shop 239–241
 - child labour 210
 - codes of conduct 238–239, 244–245
 - consequences of not considering 235–236
 - defined 236
 - in global supply chains 210
 - morality and 237–238
 - theories 236
- European Chemicals Agency (ECA) 142
- European Green Deal 141
- event tree analysis 274
- Extended Producer Responsibility (EPR) programmes 180
- Factor 4/Factor 10 130
- Fairphone 117–118, 196

- fair trade label 161–162, 232
- farming 150–151
- finance as COP26 goal 32–33
- fishing 162
- Flamingo Homegrown on Lake Naivasha, Kenya 45
- food
- anaerobic digestion 267–268
 - as area related to sustainability 44–46
 - biofuel and 64
 - emissions from production of 151
 - food miles 9–11, 74–75
 - greenhouse gases 266
 - insecurity 44–45
 - packaging 266–267
 - urban food systems 45
 - wastage 46, 267–268
- Forest Stewardship Council (FSC) 162
- forklifts *see* handling equipment
- fraud 214, 215–216
- freight transport
- accidents 55
 - air freight 57
 - alternative fuels 63–67, 65, 71–72
 - autonomous vehicles 73–74
 - backhauling 68–69
 - changing modes 60–62
 - choice of transport mode 58–60
 - CO₂ emissions 57, 59–60
 - consignment factors 59–60
 - containers 61
 - cost 58
 - Covid-19 pandemic and 63
 - emissions reduction from current mode 63–74, 65
 - empty running 68–69
 - energy consumption 54
 - fuel consumption 63
 - globalization and 62
 - growth in 53
 - handling between modes 61
 - information technology 70
 - infrastructure for 60, 72–73
 - intermodal solutions 61–62
 - loading factor 59
 - modes of 56–62, 57
 - monitoring of vehicles and drivers 70
 - multi-model solutions 61
 - noise of 54–55
 - off-peak times 73
 - operational factors 58
 - operational options to reduce emissions 67–69
 - pipelines 57
 - product characteristics 59
 - rail freight 56
 - reducing environmental impact of 60–74, 65
 - reduction of 62–63
 - road freight 56–57
 - sea freight 56
 - service requirements 58–59
 - slow steaming 67–68
 - swap-bodies 61
 - telematic systems 70
 - underutilization of vehicles 68–69
 - as visible issue 53
 - wider aspects of sustainability 74–75
 - workers 55
- fuel
- alternative fuel 63–67, 65, 71–72
 - biofuel 21, 40, 63–64
 - biomass generation of electricity 64
 - consumption 63
 - emissions for different fuels 65, 66
 - hydrogen fuel 66–67
 - information technology 70
- Fujifilm 190
- fulfilment centres, warehouses as 83–84
- functional extension 24
- gigaliners 69
- Global Compact 241–242
- global events, impact of 1
- globalization
- freight transport and 62
 - as trend affecting sustainability 12
- Global Reporting Initiative (GRI) 242–243, 263
